## LearnScape Tool Fact Sheet

- Evolving since 2005, LearnScape is a tool on the Smith System Web site that allows users (e.g., teachers, architects, faculty planners, school district administrators, construction managers, etc.) to design a classroom layout with any and all Smith System products.
- Existing Smith System designs are available, or the user can create a custom design.
- LearnScape provides users with the ability to visualize an entire classroom in 3D and is capable of rotating views in order to see various angles. Superior to the 2D programs in the market, LearnScape enhances the user's ability to visualize the classroom on screen.
- Products used in the layout can be ordered directly through the program. Additionally, designs can be saved and reused or shared with colleagues.
- LearnScape provides superior graphics using Adobe Shockwave Player, which also powers most new, high-tech video games.
- For optimum performance, the system requires a high-speed Internet connection and a 3D graphics card.
